

Insights to the Municipal Revenue Analysis

Project: Intelligence Analysis on Municipal Dataset

Executive Summary & Financial Health Overview

- The municipalities generated R742.36 million in total billing records. Out of this, R611.99 million was successfully collected, leaving an outstanding balance of R130.37 million.
- **Core Metrics:**
 - **Overall Revenue Collection Rate:** 82.4% of billed revenue has been collected, which is a solid performance baseline but leaves room to recover the remaining 17.6%.
- **Customer Base:** 25,000 customers serviced across 600,000 individual billing records.
- **Key Takeaway:** While cash flow is strong, specific bottlenecks in collections are tied directly to property types and service categories rather than general customer negligence

Payment Performance & Customer Behavior

- **Customer Payment Status:**
 - **Paid In Full:** 39.3% of customers have completely settled their accounts.
 - **Partially Paid:** Another 39.3% of the customer base makes partial payments, representing the core group to target with payment plans or incentives.
 - **Unpaid:** Only 21.3% of accounts are fully unpaid.
- **Preferred Payment Channels:**
 - **EFT and Card Payments** dominate the billing volume, with both bringing in roughly R350M–R400M each.
 - **Cash, Direct Debit, and Debit Orders** make up an extremely negligible fraction of transactions.
- **Actionable Recommendation:** Digital-first payment systems (EFT/Card) are already highly trusted. The municipality should focus optimization efforts here and run campaigns to convert the "Partially Paid" cohort via easy mobile or online payment portals

Service Type Analysis (Revenue vs. Debt)

- **The Revenue Driver:** Electricity is the massive engine of the municipality, accounting for the highest total billed amount (~R600M) and the highest absolute total collected amount (~R400M).
- **The Risk Areas:**
 - Electricity Services: Shows an alarming ratio of debt. While billing is steady (~R400M), Electricity accounts for the single highest outstanding balance on the entire dashboard (crossing R60M in arrears).
 - Actionable Recommendation: Implement strict credit control measures specifically targeting electricity bills

Customer Segmentation & Regional Trends

- **Residential vs. Business Portfolio:**

- **Residential Properties** account for the overwhelming majority of municipal billing volume.
- However, Residential also carries 58.2% of the Total Outstanding Debt, while Business carries 41.8%.
- **Property Type Breakdown:** **Houses** drive the massive bulk of collected revenue, followed closely by **Apartments**, while **Commercial** properties remain a very small slice of the volume.

- **Geographic Trends:**

- **Limpopo** and **Gauteng** have grossed the highest amount of billing revenue
- **Actionable Recommendation:** Tailor debt recovery strategies differently for the two groups. For businesses (holding 41.8% of debt despite lower billing), deploy targeted corporate account managers. For residential consumers, introduce flexible debt-relief or amnesty programs to settle old debt.

Thank You
